

Variable	Mean	SD	Min	Max
Age	34.5	10.5	18	65
Gender	Male	Female		
Marital status	Married	Single		
Education	High school	College		
Occupation	Manager	Worker		
Income	Low	High		
Health status	Good	Poor		
Smoking status	Smoker	Non-smoker		
Alcohol consumption	Regular	Occasional		
Exercise frequency	High	Low		
Stress level	High	Low		
Sleep quality	Good	Poor		
Dietary habits	Healthy	Unhealthy		
Family size	Small	Large		
Religious beliefs	Religious	Secular		
Travel frequency	High	Low		
Work-life balance	Good	Poor		
Life satisfaction	High	Low		
Overall health	Excellent	Fair		

A method and system for executing programs. The execution system executes a program with interactions. Each interaction has one or more commands that each have one or more attributes and a behavior. The execution system identifies interactions of the program to be performed and performs the commands of each identified interaction. For each command of an identified interaction, the execution system identifies the input attributes based on the values of output attributes of a previously performed command of an interaction of the program. The execution then performs the command to generate values of output attributes of the command in accordance with the behavior of the command.
